Acknowledgments

The counsel of Herbert W. Eickner of the Forest Products Laboratory in Madison, Wis., was invaluable in this work. Mr. Eickner furnished the construction drawings of the 8-ft. tunnel and advised us on the relation between surface temperature and burning rate for red oak flooring.

Maurice A. Conway

Maurice A. Conway is a native of Louisville, Kentucky. He is a member of the American Society of Certified Engineering Technicians. He has been with the Butler Manufacturing Company since 1936 and is Research Facilities Supervisor at the Product Research Center. He is a Navy veteran of World War II and is active in the YMCA. Mr. and Mrs. Conway and their daughter reside in Grandview, Missouri.

Ray J. Gabler

Ray J. Gabler is a Registered Professional Engineer. He is a native of Topeka, Kansas, and received part of his education at Washburn College and Cincinnati University. He has had thirty-two years of engineering service with the Butler Manufacturing Company and is now a Research Engineering Consultant in the Product Research Department. He and Mrs. Gabler reside in Kansas City, Missouri. His experience includes being Chief Engineer for the former Longren Aircraft Corp. of Kansas City.

Dale E. Jackson

Dr. Jackson is a native of Decatur, Ill., and completed his education at the University of Illinois in 1950 with a Ph.D. in inorganic chemistry. He was employed as a chemist in synthetic fiber research at the Du-Pont Experimental Station for six years and joined the Butler Manufacturing Co. in 1957. His research with Butler has centered on synthetic materials for construction applications. The position he presently holds is that of Product Research Manager.

Dr. Jackson is a member of ACS and SPE. He and Mrs. Jackson and their two children reside in Prairie Village, Kansas.
